Description			
<p>The implementation should use the routine <code>xt_idxlist_get_bounding_box</code> (see issue #309) in order to efficiently preselect intersection candidates coming from the distributed directory bucket lattice for later intersection computation.</p>			
<pre>Xt_xmap xt_xmap_dist_dir_dim_new(Xt_idxlist src_idxlist, Xt_idxlist dst_idxlist, int ndim, Xt_int global_size[ndim], Xt_idx global_start_index, MPI_Comm comm);</pre>
